NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

1. General information

NV Bekaert SA (the 'Company') is a company domiciled in Belgium. The Company's consolidated financial statements include those of the Company and its subsidiaries (together referred to as the 'Group' or 'Bekaert') and the Group's interest in joint ventures and associates accounted for using the equity method. The consolidated financial statements were authorized for issue by the Board of Directors of the Company on 27 March 2019.

2. Summary of principal accounting policies

2.1. Statement of compliance

The consolidated financial statements have been prepared in accordance with the International Financial Reporting Standards (IFRSs) which have been endorsed by the European Union. These financial statements are also in compliance with the IFRSs as issued by the IASB.

New and amended standards and interpretations

Standards, interpretations and amendments effective in 2018

» The Group applied IFRS 15 and IFRS 9 from 1 January 2018. Due to the transition methods chosen by the Group in applying these standards, comparative information throughout these financial statements has not been restated to reflect the requirements of the new standards.

» IFRS 15 'Revenue from Contracts with Customers' (effective 1 January 2018), establishing a single comprehensive model for entities to use in accounting for revenue arising from contracts with customers. The new standard introduces a 5-step approach to revenue recognition and measurement:
(1) identify the contract with the customer;
(2) identify the performance obligations in the contract;
(3) determine the transaction price;
(4) allocate the transaction price to the performance obligations in the contract;
(5) recognize revenue when (or as) the entity satisfies a performance obligation.

As part of the transition to the new standard, the Group opted not to restate the comparative information for 2017.

The Group recognizes revenue from the following sources: delivery of products, to a limited extent providing of services and construction contracts. Bekaert assessed that the delivery of products is the main performance obligation. Revenue is recognized when control over the corresponding goods is transferred to the customer. This is similar to the identification of separate revenue components under IAS 18. Furthermore, the allocation of revenue isn't significantly different from the method used under IAS 18. Bekaert assessed the determination of the consideration and concluded that all necessary elements (fixed, variable consideration, etc.) are included (e.g. volume bonus). The timing of revenue recognition of this performance obligation under IFRS 15 is also expected to be consistent with the practice under IAS 18. Bekaert also assessed the use of the incoterms in determining the correct point in time when revenue is being recognized and concluded that it is in line with the new revenue recognition requirements. As a consequence, Bekaert determined that the impact of transition to IFRS 15 at 1 January 2018 is immaterial.

» IFRS 9 'Financial instruments' (effective 1 January 2018) sets out requirements for recognising and measuring financial assets, financial liabilities and some contracts to buy or sell non-financial items. This standard replaces IAS 39 'Financial Instruments; Recognition and Measurement'. All recognized financial assets that are currently within the scope of IAS 39 are required to be subsequently measured at amortized cost or fair value. Only basic debt instruments acquired with the intention of collecting the contractual cash flows until their maturity are measured at amortized cost. Other debt instruments and all equity investments are measured at fair value. Equity investments can either be carried at fair value through profit or loss (FVTPL) or at fair value through other comprehensive income (FVTOCI). This option can be elected on an investment by investment basis and cannot be reversed subsequently. In principle, Bekaert will carry its main non-consolidated strategic equity investments at FVTOCI. This does not have a material effect at the date of transition (see 2.8. 'Restatement and reclassification effects').

IFRS 9 contains three principal classification categories for financial assets: measured at amortised cost, FVTOCI and FVTPL. The classification of financial assets under IFRS 9 is generally based on the business model in which a financial asset is managed and its contractual cash flow characteristics. IFRS 9 eliminates the previous IAS 39 categories of held to maturity, loans and receivables and available for sale. IFRS 9 largely retains the existing requirements in IAS 39 for the classification of financial liabilities (see note 7.3. 'Financial risk management and financial derivatives').

IFRS 9 also modifies the requirements with respect to hedge accounting. Since the establishment of BBRG, the Group had a very limited number of cash flow hedges that all expired in 2018. At year-end 2018 Bekaert has adopted the IFRS 9 hedging requirements and does not continue to apply the IAS 39 hedging requirements as would be permitted on transition to IFRS 9.

IFRS 9 replaces the 'incurred loss' model in IAS 39 with an 'expected credit loss (ECL)' model. The new impairment model applies to financial assets measured at amortised cost, contract assets and debt investments at FVTOCI, but not to investments in equity instruments. Under IFRS 9, credit losses are recognised earlier than under IAS 39 (see 2.3. 'Balance sheet items'). Bekaert determined that the application of the IFRS 9 impairment requirements at 1 January 2018 did not result in a material additional allowance for impairment.

Furthermore, it modifies the accounting for a modification or exchange of debt that does not result in a derecognition. In such a case the amortized cost is recalculated by discounting the modified contractual cashflows at the original EIR (effective interest rate) and any difference is recognized through profit or loss. The effective interest rate is only revised for transaction costs. The impact on retained earnings is disclosed in 2.8. 'Restatement effects'. When Bekaert issued the € 380 million convertible bond in 2016, 75.9% of the new bonds were accounted for as an exchange of financial liabilities and no exchange gain or loss was recognized under IAS 39. The change in accounting for a modification or exchange of debt resulted in the recognition of an increase in the amortized cost of the convertible bond of € 2.6 million against a decrease in retained earnings as at 1 January 2018 (see 2.8. 'Restatement and reclassification effects').

As part of the transition to the new standard, the Group opted not to restate the comparative information for 2017. Differences in the carrying amounts of financial assets and financial liabilities resulting from the adoption of IFRS 9 are recognized in retained earnings and reserves as at 1 January 2018. Accordingly, the information presented for 2017 does not reflect the requirements of IFRS 9, but rather those of IAS 39.

Standards, amendments and interpretations that are not yet effective in 2018 and have not been early adopted

The Group did not elect for early application of the following new or amended standards:

» IFRS 16 'Leases' (effective 1 January 2019), which supersedes IAS 17 'Leases' and related interpretations. The new standard eliminates the classification of leases as either operating leases or finance leases for a lessee. Instead, all leases are capitalized and accounted for in a similar way to finance leases under IAS 17, except short-term leases and leases of low-value assets. Lessor accounting however remains largely unchanged.

  IAS 17 does not require the recognition of any right-of-use asset or liability for future payments for these leases; instead, certain information is disclosed as operating lease commitments in 7.4. 'Contingencies and commitments'. As at 31 December 2018, the Group has operating lease commitments for a nominal amount of € 97 million. A thorough assessment indicates that all of these contracts meet the definition of a lease under IFRS 16. Bekaert decided to use the practical expedient for low-value leases on the rent contracts for printers (€ 1.5 million). The Group will recognize a right-of-use asset and a corresponding liability in respect of all other lease commitments (€ 95 million). It mainly relates to real estate, industrial vehicles, industrial equipment, company cars and servers representing a discounted value of € 77 million. An onerous lease contract currently included in provisions (€ 6.9 million) will be reclassified as a lease liability under IFRS 16.

  As part of the transition to the new standard, the Group opted to apply the modified B approach, meaning that the liability is based on the discounted future cash flows, using the discount rate at transition date and assets equaling the liabilities at transition date. The Group also opted not to restate the comparative information for 2018.

» IFRIC 23 'Uncertainty over Income Tax Treatments' (effective 1 January 2019). This interpretation clarifies how to account for income taxes when it is unclear whether the tax authority will accept the Group's tax treatment. The Group will adopt the interpretation for the annual reporting period starting on 1 January 2019. The estimated impact on the measurement of the uncertain tax positions due to the adoption of IFRIC 23 is immaterial.

  Other new, and amendments to, standards and interpretations effective after 2018 are not expected to have a material impact on the financial statements.

2.2. General principles

Basis of preparation

The consolidated financial statements are presented in thousands of euros, under the historical cost convention, except for derivatives, financial assets at FVTOCI and financial assets at FVTPL, which are stated at their fair value. Financial assets which do not have a quoted price in an active market and the fair value of which cannot be reliably measured are carried at cost. Unless explicitly stated, the accounting policies are applied consistently with the previous year.

Principles of consolidation

Subsidiaries

Subsidiaries are entities over which NV Bekaert SA exercises control, which is the case when the Company is exposed, or has rights to variable returns from its involvement with the entity and has the ability to affect these returns through its power over the entity. The financial statements of subsidiaries are included in the consolidated financial statements from the date when the Group acquires control until the date when control is relinquished. All intercompany transactions, balances with and unrealized gains on transactions between Group companies are eliminated; unrealized losses are also eliminated unless the impairment is permanent. Equity and net result attributable to non-controlling shareholders are shown separately in the balance sheet, the income statement and the comprehensive income statement. Changes in the Group's ownership interests in subsidiaries that do not result in the Group losing control over the subsidiaries are accounted for as equity transactions. The carrying amounts of the Group's interests and the non-controlling interests are adjusted to reflect the changes in their relative interests in the subsidiaries. Any difference between the amount by which the non-controlling interests are adjusted and the fair value of the consideration paid or received is recognized directly in equity. When the Group loses control of a subsidiary, the profit or loss on disposal is calculated as the difference between:

» the aggregate of the fair value of the consideration received and the fair value of any retained interest; and
» the carrying amount of the assets (including goodwill), liabilities and any non-controlling interests of the subsidiary before its disposal.

Joint arrangements and associates

A joint arrangement exists when NV Bekaert SA has contractually agreed to share control with one or more other parties, which is the case only when decisions about the relevant activities require the unanimous consent of the parties sharing control. A joint arrangement can be treated as a joint operation (i.e. NV Bekaert SA has rights to the assets and obligations for the liabilities) or a joint venture (i.e. NV Bekaert SA only has rights to the net assets). Associates are companies in which NV Bekaert SA, directly or indirectly, has a significant influence and which are neither subsidiaries nor joint arrangements. This is presumed if the Group holds at least 20% of the voting rights attaching to the shares. The financial information included for these companies is prepared using the accounting policies of the Group. When the Group has acquired joint control in a joint venture or significant influence in an associate, the share in the acquired assets, liabilities and contingent liabilities is initially remeasured to fair value at the acquisition date and accounted for using the equity method. Any excess of the purchase price over the fair value of the share in the assets, liabilities and contingent liabilities acquired is recognized as goodwill. When the goodwill is negative, it is immediately recognized in profit or loss. Subsequently, the consolidated financial statements include the Group's share of the results of joint ventures and associates accounted for using the equity method until the date when joint control or significant influence ceases. If the Group's share of the losses of a joint venture or associate exceeds the carrying amount of the investment, the investment is carried at nil value and recognition of additional losses is limited to the extent of the Group's commitment. Unrealized gains arising from transactions with joint ventures and associates are set against the investment in the joint venture or associate concerned to the extent of the Group's interest. The carrying amounts of investments in joint ventures and associates are reassessed if there are indications that the asset has been impaired or that impairment losses recognized in prior years have ceased to apply. The investments in joint ventures and associates in the balance sheet include the carrying amount of any related goodwill.

Foreign currency translation

Items included in the financial statements of each of the Group's entities are measured using the currency of the primary economic environment in which the entity operates ('the functional currency'). The consolidated financial statements are presented in euro, which is the Company's functional and the Group's presentation currency. Financial statements of foreign entities are translated as follows:

» assets and liabilities are translated at the closing exchange rate of the European Central Bank, or, in the case of the Venezuelan bolivar soberano, at the economic rate that is deemed representative for dividend repatriations at the balance sheet date;
» income, expenses and cash flows are translated at the average exchange rate for the year, or, for the Venezuelan entities, at the economic rate at the balance sheet date, as required for entities whose functional currency is the currency of a hyperinflationary economy in accordance with IAS 21 'The Effects of Changes in Foreign Exchange Rates';
» shareholders' equity is translated at historical exchange rates.

Exchange differences arising from the translation of the net investment in foreign subsidiaries, joint ventures and associates at the closing exchange rate are included in shareholders' equity under 'cumulative translation adjustments'. On disposal of foreign entities, cumulative translation adjustments are recognized in the income statement as part of the gain or loss on the sale. In the financial statements of the parent company and its subsidiaries, monetary assets and liabilities denominated in foreign currency are translated at the exchange rate at the balance sheet date, thus giving rise to unrealized exchange results. Unrealized and realized foreign-exchange gains and losses are recognized in the income statement, except when deferred in equity as qualifying cash flow hedges and qualifying net investment hedges. Goodwill is treated as an asset of the acquiree and is accordingly accounted for in the acquiree's currency and translated at the closing rate.

2.3. Balance sheet items

Intangible assets

Intangible assets acquired in a business combination are initially measured at fair value; intangible assets acquired separately are initially measured at cost. After initial recognition, intangible assets are measured at cost or fair value less accumulated amortization and any accumulated impairment losses. Intangible assets are amortized on a straight-line basis over the best estimate of their useful lives. The amortization period and method are reviewed at each financial year-end. A change in the useful life of an intangible asset is accounted for prospectively as a change in estimate. Under the provisions of IAS 38 intangible assets may have indefinite useful lives. If the useful life of an intangible asset is deemed indefinite, no amortization is recognized and the asset is reviewed at least annually for impairment.

Licenses, patents and similar rights
Expenditure on acquired licenses, patents, trademarks and similar rights is capitalized and amortized on a straight-line basis over the contractual period, if any, or the estimated useful life, which is normally considered not to be longer than ten years.

Computer software
Generally, costs associated with the acquisition, development or maintenance of computer software are recognized as an expense when they are incurred, but external costs directly associated with the acquisition and implementation of acquired ERP software are recognized as intangible assets and amortized over five years on a straight-line basis.

Rights to use land
Rights to use land are recognized as intangible assets and are amortized over the contractual period which is in most cases 50 years, but can vary between 30 and 100 years.

Commercial assets
Commercial assets mainly include customer lists, customer contracts and brand names, mostly acquired in a business combination, with useful lives ranging between 8 and 15 years.

Emission rights
In the absence of any IASB standard or interpretation regulating the accounting treatment of CO_2 emission rights, the Group has applied the 'net approach', according to which:
» the allowances are recognized as intangible assets and measured at cost (the cost of allowances issued free of charge being therefore zero); and
» any short position is recognized as a liability at the fair value of the allowances required to cover the shortfall at the balance sheet date.

Research and development
Expenditure on research activities undertaken with the prospect of gaining new scientific or technological knowledge and understanding is recognized in the income statement as an expense when it is incurred.

Expenditure on development activities where research findings are applied to a plan or design for the production of new or substantially improved products and processes prior to commercial production or use is capitalized if, and only if, all of the recognition criteria set out below are met:

» the product or process is clearly defined and costs are separately identified and reliably measured;
» the technical feasibility of the product is demonstrated;
» the product or process is to be sold or used in house;
» the assets are expected to generate future economic benefits (e.g. a potential market exists for the product or, if for internal use, its usefulness is demonstrated); and
» adequate technical, financial and other resources required for completion of the project are available.

Capitalized development costs are amortized from the commencement of commercial production of the product on a straight-line basis over the period during which benefits are expected to accrue. The period of amortization normally does not exceed ten years. An in-process research and development project acquired in a business combination is recognized as an asset separately from goodwill if its fair value can be measured reliably.

Goodwill and business combinations

Acquisitions of businesses are accounted for using the acquisition method. The consideration transferred in a business combination is measured at fair value, which is calculated as the sum of the acquisition-date fair values of the assets transferred by the Group, liabilities incurred by the Group to the former owners of the acquiree and the equity interests issued by the Group in exchange for control of the acquiree. Acquisition-related costs are recognized in profit or loss as incurred. The identifiable assets acquired and the liabilities assumed are recognized at their fair value at the acquisition date. Goodwill is measured as the difference between:

(i) the sum of the following elements:
» consideration transferred;
» amount of any non-controlling interests in the acquiree;
» fair value of the Group's previously held equity interest in the acquiree (if any); and

(ii) the net of the acquisition-date amounts of the identifiable assets acquired and the liabilities assumed. If, after reassessment, this difference is negative ('negative goodwill'), it is recognized immediately in profit or loss as a bargain purchase gain.

Non-controlling interests are initially measured either at fair value or at their proportionate share of the recognized amounts of the acquiree's identifiable net assets. The choice of measurement basis is made on a transaction-by-transaction basis.

When the consideration transferred by the Group in a business combination includes assets or liabilities resulting from a contingent consideration arrangement, the contingent consideration is measured at its acquisition-date fair value and included as part of the consideration transferred in a business combination. Subsequent changes in the fair value of the contingent consideration are recognized in profit or loss.
When a business combination is achieved in stages, the Group's previously held equity interest in the acquiree is remeasured to fair value at the acquisition date (i.e. the date when the Group obtains control) and any resulting gain or loss is recognized in profit or loss. Amounts arising from interests in the acquiree prior to the acquisition date that have previously been recognized in other comprehensive income are reclassified to profit or loss where such treatment would be appropriate if that interest was disposed of.

Impairment of goodwill

For the purpose of impairment testing, goodwill is allocated to each of the Group's cash-generating units that are expected to benefit from the synergies of the combination. Cash-generating units to which goodwill has been allocated are tested for impairment annually, or more frequently when there is an indication that the unit's value may be impaired. If the recoverable amount of the cash-generating unit is less than the carrying amount of the unit, the impairment loss is allocated first to reduce the carrying amount of any goodwill allocated to the unit and then to the other assets of the unit in proportion to the carrying amount of each asset in the unit. An impairment loss recognized for goodwill is not reversed in a subsequent period.

Property, plant and equipment

The Group has opted for the historical cost model and not for the revaluation model. Property, plant and equipment separately acquired is initially measured at cost. Property, plant and equipment acquired in a business combination is initially measured at fair value, which thus becomes its deemed cost. After initial recognition, property, plant and equipment is measured at cost less accumulated depreciation and accumulated impairment losses. Cost includes all direct costs and all expenditure incurred to bring the asset to its working condition and location for its intended use. Borrowing costs directly attributable to the acquisition, construction or production of a qualifying asset are capitalized as part of the cost of that asset. Depreciation is provided over the estimated useful lives of the various classes of property, plant and equipment on a straight-line basis.

The useful life and depreciation method are reviewed at least at each financial year-end. Unless revised due to specific changes in the estimated economic useful life, annual depreciation rates are as follows:

» land	0%
» buildings	5%
» plant, machinery & equipment	8%-25%
» R&D testing equipment	16.7%-25%
» furniture and vehicles	20%
» computer hardware	25%

Assets held under finance leases are depreciated over their expected useful lives on the same basis as owned assets or, where shorter, the term of the relevant lease. When the carrying amount of an asset is greater than its estimated recoverable amount, it is written down immediately to its recoverable amount (see section on 'Impairment of assets'). Gains and losses on disposal are included in the operating result.

Leases

Finance leases

Leases under which the Group assumes substantially all the risks and rewards of ownership are classified as finance leases. Items of property, plant and equipment acquired by way of finance lease are stated at the lower of their fair value and the present value of the minimum lease payments at inception of the lease, less accumulated depreciation and impairment losses. In calculating the present value of the minimum lease payments, the discount factor used is the interest rate implicit in the lease, when it is practicable to determine it; otherwise the Company's incremental borrowing rate is used. Initial direct costs are included as part of the asset. Lease payments are apportioned between the finance charge and the reduction of the outstanding liability. The finance charge is allocated to periods during the lease term so as to produce a constant periodic rate of interest on the remaining balance of the liability for each period. A finance lease gives rise to a depreciation expense for the asset as well as a finance expense for each accounting period. The depreciation policy for leased assets is consistent with the one for owned depreciable assets.

Operating leases

Leases under which substantially all the risks and rewards of ownership are effectively retained by the lessor are classified as operating leases. Lease payments under an operating lease are recognized as an expense on a straight-line basis over the lease term. The aggregate benefit of incentives provided by the lessor is recognized, on a straight-line basis, as a reduction of rental expense over the lease term. Improvements to buildings held under operating leases are depreciated over their expected useful lives, or, where shorter, the term of the relevant lease.

Government grants

Government grants relating to the purchase of property, plant and equipment are deducted from the cost of these assets. They are recognized in the balance sheet at their expected value at the time of initial government approval and corrected, if necessary, after final approval. The grant is amortized over the depreciation period of the underlying assets.

Financial assets

The Group classifies its financial assets in the following categories: measured at amortized cost, at fair value through profit or loss (FVTPL) or at fair value through other comprehensive income (FVTOCI). The classification depends on the contractual caracteristics of the financial assets and the business model under which they are held. Management determines the classification of its financial assets at initial recognition.

Financial assets at amortized cost

Financial assets are classified at amortized cost when the contract has the caracteristics of a basic lending arrangement and they are held with the intention of collecting the contractual cash flows until their maturity. The Group's financial assets at amortized cost comprises, unless stated otherwise, trade and other receivables, bills of exchange received, short-term deposits and cash and cash equivalents in the balance sheet. They are measured at amortized cost using the effective interest method, less any impairment.

Financial assets at fair value

Other debt instruments and all equity investments are measured at fair value. Equity investments can either be carried at fair value through profit or loss (FVTPL) or at fair value through other comprehensive income (FVTOCI). This option can be elected on an investment by investment basis and cannot be reversed subsequently. In principle, Bekaert will carry its main non-consolidated strategic equity investments at FVTOCI. Derivatives are also categorized as at FVTPL unless they are designated and effective as hedges.

Bills of exchange received

Payment by means of bills of exchange (bank acceptance drafts) is a widespread practice in China. Bills of exchange received are either settled at maturity date, discounted before the maturity date or transferred to a creditor to settle a liability. Discounting is done either with or without recourse. With recourse means that the discounting bank can claim reimbursement of the amount paid in case the issuer defaults. When a bill is discounted with recourse, the amount received is not deducted from the outstanding bills of exchange received, but a liability is recognized in 'current interest-bearing debt' until the maturity date of that bill.

Cash & cash equivalents and short-term deposits

Cash equivalents and short-term deposits are short-term investments that are readily convertible to known amounts of cash. They are subject to insignificant risk of change in value. Cash equivalents are highly liquid and have original maturities of three months or less, while short-term deposits have original maturities of more than three months and less than one year. Balances from cash pool facilities are reported as cash & cash equivalents. Bank overdrafts are not reported as a deduction from cash & cash equivalents but as interest-bearing debt.

Impairment of financial assets

Financial assets that are debt instruments, other than those measured at FVTPL, are tested for impairment using the expected loss model ('ECL'). The amount of expected credit losses is updated at each reporting date to reflect changes in credit risk since initial recognition of the respective financial instrument. When determining whether the credit risk of a financial asset has increased significantly since initial recognition and when estimating ECLs, Bekaert considers reasonable and supportable information that is relevant and available without undue cost or effort. This includes both quantitative and qualitative information and analysis, based on the Group's historical experience and informed credit assessment and including forward-looking information. The Group always recognizes lifetime ECL for trade receivables.

At each reporting date, Bekaert measures the impairment loss for financial assets measured at amortized cost (e.g. trade receivables and bills of exchange received) as the present value of the expected cash shortfalls (discounted at the original effective interest rate). Amounts deemed uncollectible are written off against the corresponding allowance account at each balance sheet date. In assessing collective impairment, the Group uses historical information on the amount of loss incurred, and made an adjustment if current economic and credit conditions were such that the actual losses were likely to be greater or lesser than suggested by historical trends. Additions to and recoveries from the bad debt allowance account related to trade receivables are reported under 'selling expenses' in the income statement.

Inventories

Inventories are valued at the lower of cost and net realizable value. Cost is determined by the first-in, first-out (FIFO) method. For processed inventories, cost means full cost including all direct and indirect production costs required to bring the inventory items to the stage of completion at the balance sheet date. Net realizable value is the estimated selling price in the ordinary course of business, less the costs of completion and costs necessary to make the sale.

Share capital

When shares are repurchased, the amount of the consideration paid, including directly attributable costs, is recognized as a change in equity. Repurchased shares (treasury shares) are presented in the balance sheet as a deduction from equity. The result on the disposal of treasury shares sold or cancelled is recognized in retained earnings.

Non-controlling interests

Non-controlling interests represent the shares of minority or non-controlling shareholders in the equity of subsidiaries which are not fully owned by the Group. At the acquisition date, the item is either measured at its fair value or at the non-controlling shareholders' proportion of the fair values of net assets recognized on acquisition of a subsidiary (business combination). Subsequently, it is adjusted for the appropriate proportion of subsequent profits and losses. The losses attributable to non-controlling shareholders in a consolidated subsidiary may exceed their interest in the equity of the subsidiary. A proportional share of total comprehensive income is attributed to the non-controlling interests even if this results in the non-controlling interests having a deficit balance.

Provisions

Provisions are recognized in the balance sheet when the Group has a present obligation (legal or constructive) as a result of a past event, which is expected to result in an outflow of resources embodying economic benefits which can be reliably estimated. Each provision is based on the best estimate of the expenditure required to settle the present obligation at the balance sheet date. When appropriate, provisions are measured on a discounted basis.

Restructuring
A provision for restructuring is only recognized when the Group has approved a detailed and formal restructuring plan, and the restructuring has either commenced or has been announced publicly before the balance sheet date. Restructuring provisions only include the direct expenditure arising from the restructuring which is necessarily incurred on the restructuring and is not associated with the ongoing activities of the entity.

Site remediation
A provision for site remediation in respect of contaminated land is recognized in accordance with the Group's published environmental policy and applicable legal requirements.

Employee benefit obligations

The parent company and several of its subsidiaries have pension, death benefit and health care benefit plans covering a substantial part of their workforce.

Defined-benefit plans
Most pension plans are defined-benefit plans with benefits based on years of service and level of remuneration. For defined-benefit plans, the amount recognized in the balance sheet (net liability or asset) is the present value of the defined-benefit obligation less the fair value of any plan assets. The present value of the defined-benefit obligation is the present value, without deducting any plan assets, of expected future payments required to settle the obligation resulting from employee service in the current and prior periods. The present value of the defined-benefit obligation and the related current and past service costs are calculated using the projected unit credit method. The discount rate used is the yield at balance sheet date on high-quality corporate bonds with remaining terms to maturity approximating those of the Group's obligations. In case the fair value of plan assets exceeds the present value of the defined-benefit obligations, the net asset is limited to the asset ceiling. The asset ceiling is the present value of any economic benefits available in the form of refunds from the plan or reductions in future contributions to the plan. The net interest on the net defined-benefit liability/asset is based on the same discount rate. Actuarial gains and losses comprise experience adjustments (the effects of differences between the previous actuarial assumptions and what has actually occurred) and the effects of changes in actuarial assumptions. Past service cost is the change in the present value of the defined-benefit obligation for employee service in prior periods and resulting in the current period from a plan amendment or a curtailment. Past service costs are recognized immediately through profit or loss. Remeasurements of the net defined-benefit liability (asset) comprise (a) actuarial gains and losses, (b) the return on plan assets, after deduction of the amounts included in net interest on the net defined-benefit liability (asset) and (c) any change in the effect of the asset ceiling, after deduction of any amounts included in net interest on the net defined-benefit liability (asset). Remeasurements are recognized immediately through equity. A settlement is a transaction that eliminates all further legal or constructive obligations for part or all of the benefits provided under a defined-benefit plan, other than a payment of benefits to, or on behalf of, employees that is set out in the terms of the plan and included in the actuarial assumptions.

In the income statement, current and past service cost, including gains or losses from settlements, are included in the operating result (EBIT), and the net interest on the net defined-benefit liability (asset) is included in interest expense, under interest on interest-bearing provisions. Pre-retirement pensions in Belgium and plans for medical care in the United States are also treated as defined-benefit plans.

Defined-contribution plans
Obligations in respect of contributions to defined-contribution pension plans are recognized as an expense in the income statement as they fall due. By law, defined-contribution pension plans in Belgium are subject to minimum guaranteed rates of return. Before 2015, the defined-contribution plans in Belgium were basically accounted for as defined-contribution plans. New legislation dated December 2015 however triggered the qualification. As a consequence, the defined-contribution plans are reported as defined-benefit obligations, whereby as from year end 2016 an actuarial valuation was performed.

Other long-term employee benefits
Other long-term employee benefits, such as service awards, are accounted for using the projected unit credit method. However, the accounting method differs from the method applied for post-employment benefits, as actuarial gains and losses are recognized immediately through profit or loss.

Share-based payment plans
The Group issues equity-settled and cash-settled share-based payments to certain employees. Equity-settled plans allow Group employees to acquire shares of NV Bekaert SA, and include stock option plans ('SOP'), performance share plans ('PSP') and personal shareholding requirement plans ('PSR'), all of which are operated in Belgium. Cash-settled plans entitle Group employees to receive payment of cash bonuses based on the price of the Bekaert share on the Euronext stock exchange, and include share appreciation rights ('SAR') and performance share unit plans ('PSU'), all of which are operated outside Belgium.
Equity-settled share-based payments are recognized at fair value (excluding the effect of non-market-based vesting conditions) at the date of grant. The fair value determined at the grant date of the equity-settled share-based payments is expensed, with a corresponding increase in equity, on a straight-line basis over the vesting period, based on the Group's estimate of the number of equity instruments granted that will eventually vest and adjusted for the effect of non-market-based vesting conditions.
Cash-settled share-based payments are recognized as liabilities over the vesting period at fair value, which is remeasured at each reporting date and at the date of settlement. Changes in fair value are recognized in the income statement over the vesting period, taking into account the number of units or rights expected to vest.
The Group uses binomial models or Monte Carlo simulations to determine the fair value of the share-based payment plans.

Interest-bearing debt

Interest-bearing debt includes loans and borrowings which are initially recognized at the fair value of the consideration received net of transaction costs incurred. In subsequent periods, they are carried at amortized cost using the effective interest-method, any difference between the proceeds (net of transaction costs) and the redemption value being recognized in the income statement over the period of the liability. If financial liabilities are hedged using derivatives qualifying as a fair value hedge, the hedging instruments are carried at fair value and the hedged items are remeasured for fair value changes due to the hedged risk (see accounting policies for derivatives and hedging).

Trade payables and other current liabilities

Trade payables and other current liabilities, except derivatives, are initially measured at cost, which is the fair value of the consideration payable, and subsequently carried at amortized cost.

Income taxes

Income taxes are classified as either current or deferred taxes. Current income taxes include expected tax charges based on the accounting profit for the current year and adjustments to tax charges of prior years. In evaluating the potential income tax liabilities, the Group assumes that the tax authorities will examine amounts they have a right to examine and have full knowledge of all related information when making those examinations. The Group takes into account both the assessments, decisions and verdicts received from tax audits and other kinds of information sources as well as the potential sources of challenge from tax authorities. The Group recognizes a liability when the Group assesses it is not probable for the tax authorities to accept the position that the Group takes regarding the tax treatment in question. The Group measures the income tax liability according to the most likely amount of the potential economic outflow. However, Bekaert continues to believe that its positions on all these audits are robust.
Deferred taxes are calculated, using the liability method, on temporary differences arising between the tax bases of assets and liabilities and their carrying amounts. Deferred taxes are measured using the tax rates expected to apply to taxable income in the years in which those temporary differences are expected to be realized or settled, based on tax rates enacted or substantively enacted at the balance sheet date. Deferred tax assets are recognized to the extent that it is probable that future taxable profit will be available against which the temporary differences can be utilized; this criterion is reassessed at each balance sheet date. Deferred tax on temporary differences arising on investments in subsidiaries, associates and joint ventures is provided for, except where the Group is able to control the timing of the reversal of the temporary difference and it is probable that the temporary difference will not be reversed in the foreseeable future.

Derivatives, hedging and hedging reserves

The Group uses derivatives to hedge its exposure to foreign-exchange and interest-rate risks arising from operating, financing and investing activities. The net exposure of all subsidiaries is managed on a centralized basis by Group Treasury in accordance with the aims and principles laid down by general management. As a policy, the Group does not engage in speculative or leveraged transactions.

Derivatives are initially and subsequently measured and carried at fair value. The fair value of traded derivatives is equal to their market value. If no market value is available, the fair value is calculated using standard financial valuation models, based upon the relevant market rates at the reporting date.

The Group applies hedge accounting in accordance with IFRS 9 to reduce income statement volatility. Depending on the nature of the hedged risk, a distinction is made between fair value hedges, cash flow hedges and hedges of a net investment in a foreign entity.

Fair value hedges are hedges of the exposure to variability in the fair value of recognized assets and liabilities. The derivatives classified as fair value hedges are carried at fair value and the related hedged items (assets or liabilities) are remeasured for fair value changes due to the hedged risk. The corresponding changes in fair value are recognized in the income statement. When a hedge ceases to meet the qualifying criteria, hedge accounting is discontinued and the adjustment to the carrying amount of a hedged interest-bearing financial instrument is recognized as income or expense and will be fully amortized over the remaining period to maturity of the hedged item.

Cash flow hedges are hedges of the exposure to variability in future cash flows related to recognized assets or liabilities, highly probable forecast transactions or currency risk on unrecognized firm commitments. Changes in the fair value of a hedging instrument that qualifies as a highly effective cash flow hedge are recognized directly in shareholders' equity (hedging reserve). The ineffective portion is recognized immediately in the income statement. If the hedged cash flow results in the recognition of a non-financial asset or liability, all gains and losses previously recognized directly in equity are transferred from equity and included in the initial measurement of the cost or carrying amount of the asset or liability. For all other cash flow hedges, gains and losses initially recognized in equity are transferred from the hedging reserve to the income statement when the hedged firm commitment or forecast transaction results in the recognition of a profit or loss. When the hedge ceases to meet the qualifying criteria, hedge accounting is discontinued prospectively and the accumulated gain or loss is retained in equity until the committed or forecast transaction occurs. If the forecast transaction is no longer expected to occur, any net cumulative gain or loss previously reported in equity is transferred to the income statement.

If a net investment in a foreign entity is hedged, all gains or losses on the effective portion of the hedging instrument, together with any gains or losses on the foreign-currency translation of the hedged investment, are taken directly to equity. Any gains or losses on the ineffective portion are recognized immediately in the income statement. The cumulative remeasurement gains and losses on the hedging instrument, that had previously been recognized directly in equity, and the gains and losses on the currency translation of the hedged item are recognized in the income statement only on disposal of the investment.

In order to comply with the requirements of IFRS 9 regarding the use of hedge accounting, the strategy and purpose of the hedge, the relationship between the financial instrument used as the hedging instrument and the hedged item and the estimated (prospective) effectiveness are documented by the Group at the inception of the hedge. The effectiveness of existing hedges is monitored on a quarterly basis.
The Group also uses derivatives that do not satisfy the hedge accounting criteria of IFRS 9 but provide effective economic hedges under the Group's risk management policies. Changes in the fair value of any such derivatives are recognized immediately in the income statement.

Derivatives embedded in non-derivative host contracts that are not financial assets are treated as separate derivatives when they meet the definition of a derivative, their risks and characteristics are not closely related to those of the host contract and the host contract is not measured at fair value through profit or loss.

Impairment of assets

Goodwill and intangible assets with an indefinite useful life or not yet available for use (if any) are reviewed for impairment at least annually; other tangible and intangible fixed assets are reviewed for impairment whenever events or changes in circumstances indicate that their carrying amount may not be recoverable. An impairment loss is recognized in the income statement as and when the carrying amount of an asset exceeds its recoverable amount (being the higher of its fair value less costs of disposal and its value in use). The fair value less costs of disposal is the amount obtainable from the sale of an asset in an arm's length transaction less the costs of disposal, while value in use is the present value of the future cash flows expected to be derived from an asset. Recoverable amounts are estimated for individual assets or, if this is not possible, for the smallest cash-generating unit to which the assets belong. Reversal of impairment losses recognized in prior years is included as income when there is an indication that the impairment losses recognized for the asset are no longer needed or the need has decreased, except for impairment losses on goodwill, which are never reversed.

2.4. Income statement items

Revenue recognition

The Group recognizes revenue mainly from the sale of products. Revenue is measured based on the consideration to which the Group expects to be entitled in a contract with a customer and excludes amounts collected on behalf of third parties. The Group recognizes revenue from the sale of products when it transfers control over the corresponding product to a customer. Revenue from the sale of products is recognized at a point in time. Sales are recognized net of sales taxes and discounts. No revenue is recognized on barter transactions involving the exchange of similar goods or services. Interest is recognized on a time-proportional basis that reflects the effective yield on the asset. Royalties are recognized on an accrual basis in accordance with the terms of agreements. Dividends are recognized when the shareholder's right to receive payment is established.

2.5. Statement of comprehensive income and statement of changes in equity

The statement of comprehensive income presents an overview of all income and expenses recognized both in the income statement and in equity. In accordance with IAS 1 'Presentation of Financial Statements', an entity can elect to present either a single statement of comprehensive income or two statements, i.e. an income statement immediately followed by a comprehensive income statement. The Group elected to do the latter. A further consequence of presenting a statement of comprehensive income is that the content of the statement of changes in equity is confined to owner-related changes only.

2.6. Alternative performance measures

To analyze the financial performance of the Group, Bekaert consistently uses various non-GAAP metrics or Alternative Performance Measures ("APMs") as defined in the European Securities and Markets Authority's ("ESMA") Guidelines on Alternative Performance Measures. In accordance with these ESMA Guidelines, the definition and reason for use of each of the APMs is provided in the Key Figures section of the Report of the Board. The main APMs used in the Financial Review relate to Underlying performance measures.

Underlying performance measures

Operating income and expenses that are related to restructuring programs, impairment losses, the initial accounting for business combinations, business disposals, environmental provisions or other events and transactions that have a one-off effect are excluded from Underlying EBIT(DA) measures.

Restructuring programs mainly include lay-off costs, gains and losses on disposal, and impairment losses of assets involved in a shut-down, major reorganization or relocation of operations. When not related to restructuring programs, only impairment losses resulting from testing cash-generating units qualify as one-off effects.

One-off effects from business combinations mainly include: acquisition-related expenses, negative goodwill, gains and losses on step acquisition, and recycling of CTA on the interest previously held. One-off effects from business disposals include gains and losses on the sale of businesses that do not qualify as discontinued operations. These disposed businesses may consist of integral, or parts (disposal groups) of subsidiaries, joint ventures and associates.

Besides environmental provisions, other events or transactions that are not inherent to the business and have a one-off effect mainly include disasters and sales of investment property.

2.7. Miscellaneous

Non-current assets held for sale and discontinued operations

A non-current asset or disposal group is classified as held for sale if its carrying amount will be recovered principally through a sale transaction rather than through continuing use. This condition is regarded as met only when the sale is highly probable and the asset (or disposal group) is available for immediate sale in its present condition. A discontinued operation is a component of an entity which the entity has disposed of or which is classified as held for sale, which represents a separate major line of business or geographical area of operations and which can be distinguished operationally and for financial reporting purposes.

For a sale to be highly probable, the entity should be committed to a plan to sell the asset (or disposal group), an active program to locate a buyer and complete the plan should be initiated, and the asset (or disposal group) should be actively marketed at a price which is reasonable in relation to its current fair value, and the sale should be expected to be completed within one year from the date of classification. Assets classified as held for sale are measured at the lower of their carrying amount and fair value less costs necessary to make the sale. Any excess of the carrying amount over the fair value less costs to sell is included as an impairment loss. Depreciation of such assets is discontinued as from their classification as held for sale. Comparative balance sheet information for prior periods is not restated to reflect the new classification in the balance sheet.

Contingencies

Contingent assets are not recognized in the financial statements. They are disclosed if the inflow of economic benefits is probable. Contingent liabilities are not recognized in the financial statements, except if they arise from a business combination. They are disclosed, unless the possibility of a loss is remote.

Events after the balance sheet date

Events after the balance sheet date which provide additional information about the Company’s position as at the balance sheet date (adjusting events) are reflected in the financial statements. Events after the balance sheet date which are not adjusting events are disclosed in the notes if material.

2.8. Restatement and reclassification effects

Following elements have given rise to restatements and/or reclassifications in these financial statements:

1. The coming into effect of IFRS 9 ‘Financial instruments’ as from 1 January 2018 entailed two restatements. In accordance with the option elected by the Group not to restate comparative information for 2017 in the transition to the new standard, both restatements were accounted for through the 2018 opening balance:

   a. Under the new IFRS 9 guidance on how to account for a modification of financial liabilities that does not lead to derecognition, the difference between the amortized cost of the financial liability at the date of modification and the discounted modified cash flows at the initial effective interest rate should be recognized in profit or loss, while under IAS 39 this difference was amortized over the remaining term of the modified liability. The new guidance was applied to the € 380 million convertible bond issued in 2016, the better part of which served to early settle an existing convertible bond. This resulted in the recognition of an increase in the amortized cost of the convertible bond of € 2.6 million against a decrease in retained earnings as at 1 January 2018. In accordance with the deferred tax policy used for the issuing company, the resulting decrease in deferred tax liabilities was offset by an equivalent net decrease in deferred tax assets.
   b. Non-consolidated equity investments were formerly accounted for as available-for-sale financial assets. Under the new guidance on equity investments, the Group elected to carry its main non-consolidated strategic investments at fair value through OCI (FVTOCI). Consequently, the accumulated impairment losses (€ 10.2 million) on these investments formerly recognized through income statement were reclassified within equity from retained earnings to the revaluation reserve for non-consolidated equity investments carried at FVTOCI as at 1 January 2018. When an equity investment at FVTOCI is disposed, its revaluation reserve is not reclassified to income statement under IFRS 9.

Restated items in thousands of €	**Restatement effects 1 Jan 2018**
Consolidated balance sheet	
Deferred tax assets *(a)*	-646
Non-current assets	-646

3. In accordance with IAS 7 'Statement of cash flows', cash flows relating to purchases or sales of non-controlling interests should be reported as cash flows from financing activities and not as cash flows from investing activities. This resulted in a € -17.0 million reclassification in the comparative information for 2017. The amount relates to the purchase of the remaining non-controlling interests held by Ansteel in Bekaert (Chongqing) Steel Cord Co.
